## Core Mathematics C1 Paper J

1. Evaluate $49^{\frac{1}{2}}+8^{\frac{2}{3}}$.
2. Solve the equation

$$
\begin{equation*}
3 x-\frac{5}{x}=2 . \tag{4}
\end{equation*}
$$

3. Find the set of values of $x$ for which
(i) $6 x-11>x+4$,
(ii) $x^{2}-6 x-16<0$.
4. (i) Sketch on the same diagram the graphs of $y=(x-1)^{2}(x-5)$ and $y=8-2 x$.

Label on your diagram the coordinates of any points where each graph meets the coordinate axes.
(ii) Explain how your diagram shows that there is only one solution, $\alpha$, to the equation

$$
\begin{equation*}
(x-1)^{2}(x-5)=8-2 x . \tag{1}
\end{equation*}
$$

(iii) State the integer, $n$, such that

$$
\begin{equation*}
n<\alpha<n+1 . \tag{1}
\end{equation*}
$$

5. 

$$
\mathrm{f}(x)=x^{2}-10 x+17
$$

(a) Express $\mathrm{f}(x)$ in the form $a(x+b)^{2}+c$.
(b) State the coordinates of the minimum point of the curve $y=\mathrm{f}(x)$.
(c) Deduce the coordinates of the minimum point of each of the following curves:
(i) $y=\mathrm{f}(x)+4$,
(ii) $y=\mathrm{f}(2 x)$.
6. The points $P, Q$ and $R$ have coordinates $(-5,2),(-3,8)$ and $(9,4)$ respectively.
(i) Show that $\angle P Q R=90^{\circ}$.

Given that $P, Q$ and $R$ all lie on a circle,
(ii) find the coordinates of the centre of the circle,
(iii) show that the equation of the circle can be written in the form

$$
x^{2}+y^{2}-4 x-6 y=k
$$

where $k$ is an integer to be found.
7. The straight line $l_{1}$ has gradient $\frac{3}{2}$ and passes through the point $A(5,3)$.
(i) Find an equation for $l_{1}$ in the form $y=m x+c$.

The straight line $l_{2}$ has the equation $3 x-4 y+3=0$ and intersects $l_{1}$ at the point $B$.
(ii) Find the coordinates of $B$.
(iii) Find the coordinates of the mid-point of $A B$.
(iv) Show that the straight line parallel to $l_{2}$ which passes through the mid-point of $A B$ also passes through the origin.
8.

The diagram shows the curve with equation $y=2+3 x-x^{2}$ and the straight lines $l$ and $m$.

The line $l$ is the tangent to the curve at the point $A$ where the curve crosses the $y$-axis.
(i) Find an equation for $l$.

The line $m$ is the normal to the curve at the point $B$.
Given that $l$ and $m$ are parallel,
(ii) find the coordinates of $B$.
9. The curve $C$ has the equation

$$
y=3-x^{\frac{1}{2}}-2 x^{-\frac{1}{2}}, x>0
$$

(i) Find the coordinates of the points where $C$ crosses the $x$-axis.
(ii) Find the exact coordinates of the stationary point of $C$.
(iii) Determine the nature of the stationary point.
(iv) Sketch the curve C.
