Further Concepts for Advanced Mathematics (FP1)
Thursday 8 JUNE 20061 hour 30 minutes
Additional materials:
8 page answer booklet
Graph paper
MEI Examination Formulae and Tables (MF2)

## TIME 1 hour 30 minutes

## INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Answer all the questions.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

## INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- You are advised that an answer may receive no marks unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is 72 .

## Section A (36 marks)

1 (i) State the transformation represented by the matrix $\left(\begin{array}{rr}1 & 0 \\ 0 & -1\end{array}\right)$.
(ii) Write down the $2 \times 2$ matrix for rotation through $90^{\circ}$ anticlockwise about the origin.
(iii) Find the $2 \times 2$ matrix for rotation through $90^{\circ}$ anticlockwise about the origin, followed by reflection in the $x$-axis.

2 Find the values of $A, B, C$ and $D$ in the identity

$$
\begin{equation*}
2 x^{3}-3 x^{2}+x-2 \equiv(x+2)\left(A x^{2}+B x+C\right)+D . \tag{5}
\end{equation*}
$$

3 The cubic equation $z^{3}+4 z^{2}-3 z+1=0$ has roots $\alpha, \beta$ and $\gamma$.
(i) Write down the values of $\alpha+\beta+\gamma, \alpha \beta+\beta \gamma+\gamma \alpha$ and $\alpha \beta \gamma$.
(ii) Show that $\alpha^{2}+\beta^{2}+\gamma^{2}=22$.

4 Indicate, on separate Argand diagrams,
(i) the set of points $z$ for which $|z-(3-j)| \leqslant 3$,
(ii) the set of points $z$ for which $1<|z-(3-\mathrm{j})| \leqslant 3$,
(iii) the set of points $z$ for which $\arg (z-(3-\mathrm{j}))=\frac{1}{4} \pi$.

5 (i) The matrix $\mathbf{S}=\left(\begin{array}{ll}-1 & 2 \\ -3 & 4\end{array}\right)$ represents a transformation.
(A) Show that the point $(1,1)$ is invariant under this transformation.
(B) Calculate $\mathbf{S}^{-1}$.
(C) Verify that $(1,1)$ is also invariant under the transformation represented by $\mathbf{S}^{-1}$.
(ii) Part (i) may be generalised as follows.

If $(x, y)$ is an invariant point under a transformation represented by the non-singular matrix $\mathbf{T}$, it is also invariant under the transformation represented by $\mathbf{T}^{-1}$.

Starting with $\mathbf{T}\binom{x}{y}=\binom{x}{y}$, or otherwise, prove this result.
6 Prove by induction that $3+6+12+\ldots+3 \times 2^{n-1}=3\left(2^{n}-1\right)$ for all positive integers $n$.

Section B (36 marks)
7 A curve has equation $y=\frac{x^{2}}{(x-2)(x+1)}$.
(i) Write down the equations of the three asymptotes.
(ii) Determine whether the curve approaches the horizontal asymptote from above or from below for
(A) large positive values of $x$,
(B) large negative values of $x$.
(iii) Sketch the curve.
(iv) Solve the inequality $\frac{x^{2}}{(x-2)(x+1)}>0$.

8 (i) Verify that $2+\mathrm{j}$ is a root of the equation $2 x^{3}-11 x^{2}+22 x-15=0$.
(ii) Write down the other complex root.
(iii) Find the third root of the equation.

9 (i) Show that $r(r+1)(r+2)-(r-1) r(r+1) \equiv 3 r(r+1)$.
(ii) Hence use the method of differences to find an expression for $\sum_{r=1}^{n} r(r+1)$.
(iii) Show that you can obtain the same expression for $\sum_{r=1}^{n} r(r+1)$ using the standard formulae for $\sum_{r=1}^{n} r$ and $\sum_{r=1}^{n} r^{2}$.
